

SONAL FERNANDO

Software Engineer

sonal.1998fernando@gmail.com — +94766697975 — [LinkedIn Profile](#)

Professional Summary

Software Engineer with over 5 years of experience designing, developing, and supporting enterprise applications, system integrations, and cloud-based solutions. Skilled in .NET, Azure, Power Platform, and IFS, with a strong track record of delivering scalable, reliable, and business-focused solutions. Experienced in automating workflows and integrating enterprise systems using Power Automate, Power Apps, APIs, and cloud services to reduce manual effort and improve operational efficiency. Adept at troubleshooting complex technical issues, optimizing business processes, and collaborating with cross-functional teams in Agile environments to deliver high-quality solutions that drive continuous improvement and operational excellence.

Experience

Technical Consultant – *Enterprise Analytics* (June 2025 - February 2026)

- Provided customer support and technical consultation for IFS Cloud and IFS Applications 10 environments.
- Developed and delivered enterprise solutions using IFS Cloud and PL/SQL.
- Configured and optimized IFS solutions based on customer requirements and business processes.
- Collaborated with end users and stakeholders to improve solution adoption and business outcomes.

Software Engineer – *IFS R&D International (Pvt) Ltd.* (September 2021 - March 2025)

- Developed the IFS Cloud Emissions Tracker application using .NET, Power Platform, and Azure, including the design and implementation of the initial integration process between the solution and IFS Cloud.
- Collaborated with cross-functional teams to analyze customer requirements, design process flows, and deliver high-quality software solutions aligned with business objectives and project timelines.
- Architected process flows and developed the Schedule of Work component within IFS Cloud, applying structured quality assurance practices using IFS Marble and PL/SQL while improving the performance and responsiveness of IFS Cloud Lobby components.
- Created and maintained technical knowledge base content and customer documentation, and utilized Bitbucket and Jira for version control, project tracking, and delivery management.
- Performed unit testing, integration testing, and defect resolution throughout the software development lifecycle.
- Participated in code reviews and quality assurance activities to ensure software reliability.

Software Engineer / Software Engineering Trainee – *COMPULIN* (January 2020 - August 2021)

- Gathered and analyzed customer requirements to support enterprise application development and implementation.
- Developed and enhanced SMART HRIS and BUILD SMART ERP reporting modules using ASP.NET technologies.
- Built and maintained web and desktop applications using ASP.NET Core, JavaScript, Bootstrap, WinForms, XML, ADO.NET, and MSSQL.
- Supported customer deployments, troubleshooting, and post-implementation activities to ensure successful solution delivery.

Education

BSc. (Hons) Software Engineering - First Class Honours (March 2017 - July 2020)

NSBM Green University, Sri Lanka (Degree awarded by the University of Plymouth, UK)

Projects

IFS Cloud Emissions Tracker

- Involvement of development and delivery of components within the IFS Cloud Emissions Tracker, developed using PowerApps, Power Automate, Power BI, Javascript, .Net plugins, Azure, Jira, Git.

IFS Cloud

- Development and delivery of the schedule of work component within the IFS Cloud.
- along with Performance improvements of lobby components within IFS Cloud.

BUILDSMART ERP

- Adding components that are relevant for the in-house ERP and its reporting modules

SMART HRIS

- Development and deployment of reporting pages and employee registration pages using .Net technologies, AWS and MSSQL.

Carbon Footprint Calculation Tool

- Development and delivery of a carbon footprint calculation tool that was implemented and used within JAT Holdings(PLC.), developed using Flutter, Python .Net, MySQL, Entity Framework.

Shop Lite

- A E-Commerce web application developed using Next.js, ASP.Net Core and MySql, along with containerization through docker.

Devops Infra Project

- A DevOps infrastructure project that involved the use of Terraform, Kubernetes and Docker to set up a scalable and efficient deployment architecture for scalable containerization.

Keda Demo

- A demonstration project that involved the use of KEDA to implement event-driven scaling for a containerized application, within Kubernetes, KEDA and RabbitMQ.

Technical Skills

Programming Languages: JavaScript, SQL, PL/SQL, .NET (C#)

Frameworks & Platforms: Angular, React, IFS APPS10, IFS Cloud, Power Platform (PowerApps, Power Automate, Power BI)

Developer Tools & DevOps: Git, Docker, Kubernetes, Terraform, Azure DevOps, Jira

Databases & Data: MSSQL, XML
